Response to Amendment/Arguments

1. Applicant's arguments, (pages 7-15), filed on March 31, 2005, with respect to the rejection(s) of claim(s) 1, 11, 21 and 30 under Iyriboz et al (U S 6,369,812 B1) and Fabin (U S 5,195,122) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, a double patenting rejection is disclosed.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-36 of U S Application 09/755,238 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-36 of copending Application No. 10/323,967 respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant Application has more specific scope for the claims 1, 11, 21 and 30 "asymmetrical projection upon an image plane". Furthermore it would have been obvious to an ordinary skill in the

Art Unit: 2625

art to use asymmetrical projection upon an image plane because an x-ray computer tomography technique using asymmetrical projection radiation could reduced Patients encounter less radiation exposure and fewer treatment errors, and reduce the amount of processed.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 2-10, 12-20, 22-29 and 31-36 of Instant Application correspond over claims 2-10, 12-20, 22-29 and 31-36 of copending Application No. 10/323,967.
